

SCHOOL OF PUBLIC HEALTH

UNIVERSITY AT ALBANY State University of New York

What is Public Health?

Public health is the science of protecting and improving the health of communities through education, promotion of healthy lifestyles and research for disease and injury prevention.

Professionals in the field analyze the effect that genetics, behavior and the environment have on health and develop policies, programs and solutions.

The UAlbany Advantage

The University at Albany School of Public Health's model of public health education is known around the globe as a leader in hands-on learning. Created in partnership with the New York State Department of Health, students have the opportunity to observe and help address pressing public health problems as they occur, using some of the largest information databases in the world and working directly with top experts in the field. Many of the faculty work in the Wadsworth Center Labs, known as the premier state public health laboratory in the United States. This creates unique educational, research and public health opportunities for students to address today's most critical public health problems.

Practice-Based Education

UAlbany's public health internship program remains the most extensive for practice-based public health education, with students completing 720 hours of internship experience in diverse areas of public health. Students gain hands-on experience in community-based and non-governmental organizations, state, county and local health departments, private sector businesses, as well as internationally. The in-depth training results in a well-prepared graduate with a strong advantage in the workforce.

Career Readiness

93% to 97% of our graduates seeking employment are working in public health jobs within one year of graduation with 93% of placements occurring within six months.

Faculty Research

- Cancer epidemiology and cancer genomics
- COVID-19 and emerging diseases
