Corrections to "Random Lazy Random Walks on Arbitrary
Finite Groups" by Martin Hildebrand

J. Theoret. Probab. **14** (2001), 1019-1034.

On the second line from the bottom, it is claimed that x is a function of $g_1, \ldots, g_j$. In fact, x is a function of $g_1, \ldots, g_\ell$ (as described in Proposition 7). The author regrets not detecting the incorrect subscript before publication.

The author also wishes to acknowledge that the concerns raised on p. 1026 about a proof of Pak were previously raised by the author in a *Mathematical Reviews* review of Pak's paper. The author hopes that this omission of acknowledgment in the paper does not mislead readers.
